

Which parameters are pinned against their prior
89% posterior interval, each rescaled to its own prior range; sorted by distance to the nearest bound

interval within 0.02 of a bound clear of both bounds

Bounds read from `PARAMETER_REGISTRY`, `canopy_bounds('hemisurface')` and `reparameterised_bounds()`. Plumbing run: 2 chains, 200 tune, 200 draws, 1997-1998. Machinery check, NOT a posterior.
